NATO Network Enabled Capability (NNEC) is the Alliance's ability to federate various capabilities at all levels, military (strategic to tactical) and civilian, through an information infrastructure. It is the goal of this program to federate all our nation's assets which will create enhanced information systems to better disseminate the information necessary to complete any mission.

Share to Win

Share What?

Share information and assets of national and NATO networks and infrastructure. Share capabilities and best practices.

Win What?

Better shared information leads to better situational awareness which leads to decision superiority. and supports the agility of NATO forces thus gaining an advantage over the opponent.

Share to Win is not an elective statement, but a requirement to move forward to achieve our desired goals and outcomes. Share to Win is not just a slogan; it is a change in philosophy and business practices to achieve our common goal and outcomes. NNEC provides people the capability to share more effectively and efficiently.

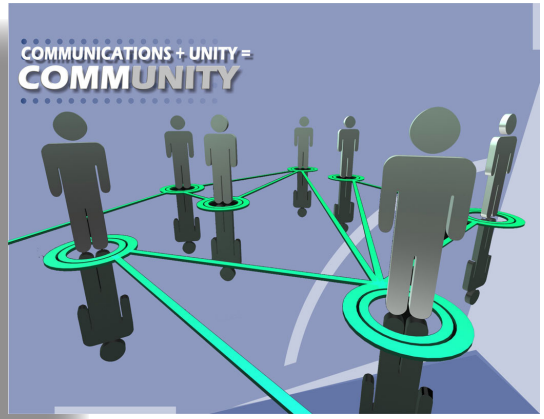
NATO NETWORK ENABLED CAPABILITY

NNEC Key Messages

Communications + Unity =Community:
Seamless communication begins with the willingness of the users; the people of NATO and not only those who are a part of CIS or the C4I community. This type of thinking will bring us closer to putting into place the interoperability procedures which will effectively disseminate the right information to the right people at the right time.



Collaboration at the Speed of Tomorrow:
NATO holds a global influence, in essence, a role model to the world. Collaborating with one another by responding to humanitarian issues and participating in conflict resolution are just a few ways NATO sets standards on how to work together.

Different Networks; One Mission:
NNEC is not trying to build another network; but instead adapt a "plug and play" concept utilizing current individual nation's assets. This ideal concept of "plug in and play" would allow each nation to "plug" into NATO's information system and be connected seamlessly.

Federating Assets for a Stronger Alliance:
Bringing together the nation's assets will build a stronger Alliance. Improved efficiency, increased interoperability between nations, improved way of sharing information, and realizing enhanced, secured, trusted, and better managed information are just a few benefits.
